

Expro can supply equipment packages ranging from 30 MMCFD / 4,000 BFPD to 500 MMCFD / 40,000 BFPD and vessels with operating pressures ranging from 200 psi w.p. to 1,440 psi w.p. These portable units range from skid mounted units with 4" inlet/outlets to trailer mounted systems with 16" inlet/outlets. Our equipment is designed to meet the highest safety standards and operational efficiencies in the pipeline industry with all vessels being ASME certified. Separators are designed with 2 or 3 phase (liquid/gas, liquid/liquid, and gas/liquid/liquid) separation capabilities. This can be done in either offline or online operations where the waste product can be transferred to temporary storage for disposal and the clean product can be transferred back into the pipeline.
