

Expro Excellence

Expro Subsea Well Access delivery and adaptability saves customer approximately 3 days rig time

Subsea Well Access

Objectives and background

- The customer's operations were in the remote location of Equatorial Guinea which added additional challenges to the project
- The customer had a tight delivery for the first well on the original rig chosen for the operation. Expro's project management and delivery teams provided extraordinary performance in meeting client delivery expectations
- A late change in the customer's requirements resulted in a change from a 9 5/8" slick joint to a 7 5/8" slick joint. We were able to implement this alternative solution by sourcing equipment from our vast equipment inventory. This change prevented the customer from having to pull the BOP prior to completion operations saving them at least three days of rig time
- After the first well, the customer changed out the rig which resulted in Expro requiring a reconfiguration of equipment to the new rig BOP. Expro modified existing equipment by performing machining work in Equatorial Guinea, ensuring the interface with the new rig was seamless and no downtime was encountered

Expro Excellence

- The customer was deploying two new development wells and performed an intervention on one offshore well in Equatorial Guinea. Expro's local content and adaptability ensured machining work could be performed in country to meet the operational timeline
- Delivery, support and operational personnel exceeded expectations to ensure clients deadlines were met and no operational downtime encountered
- Expro offshore crew commended by both client and rig operator for safety and performance, having to adapted seamlessly to different safety management systems across both rigs utilized

Value to the client

- Expro's experience, track record and vast rental inventory contributed to significant cost savings by providing efficiencies in operations, saving approximately 3 days in rig time

“
Expro's crew have been a pleasure to work with throughout the campaign. Both rig crew and the customer commented on the attitude and hard work that the guys showed throughout the project. The crew showed a great team spirit during operations.”

Safety

Reduction of rig time
