

Pressure Test Sub MX™

For in-hole string testing, the Pressure Test Sub MX™ is a simple and accurate way to perform multiple, variable pressure tests on the string. It has the added capability of regaining full circulation after each test.

The system comprises of the test and catcher subs installed below the drill pipe that is to be pressured up. Simply pump the pre-configured smart dart into the sub and hold pressure post land out. Once complete, shear the dart out into the catcher and resume operations.

The subs can be run below any length of pipe, at any angle or temperature, and can be used with any type of circulation fluid.

BENEFITS

- Multi-cycle – perform repeat tests at varying pressures as required
- Pre-configured darts for specific pressures
- Quick and simple drill pipe integrity test
- Regain full circulation after each
