

Well Construction

Cementing Technologies | Cure Technologies

CoreCure®

Expro's CoreCure® is the only technique enabling recovery of a downhole cement sample, directly from the shoe of the casing.

CoreCure® confirms the quality of cement after it has been mixed and pumped downhole, providing additional data for the subsequent formation integrity test (FIT) or leak off test (LOTs).

Benefits

- Reduces uncertainty of formation integrity or leak off tests
- Ultimate proof of regulatory compliance
- Confirmation of quality primary cement job
- Allows well operations to be continued with confidence

Cement sample recovered from beneath the latch in adapter ball seat of the SeaCure® system. A qualitative but definitive example of cement quality at the shoe.

Latch-in adaptor with ball seat installed
