CureCatcher®

Multi-mechanical Interface Cementing

Available with any of Expro's Cure systems, our CureCatcher® float shoe or collar allows a leading mechanical interface for the cement job through the use of a foam ball which is launched into the inner-string before the cement.

Combined with a SeaCure® wiper plug, both leading and displacing fluid interfaces can be mechanically separated.

Benefits

- Allows for the use of multiple mechanical interfaces when cementing casings or liners
- Reliable catching of liner activation equipment such as drop balls
- Reduced contamination of cement job
- Run as part of the SeaCure® system
- A simple and reliable process
